

Wallpaper Maintenance Guide (Vinyl-front)

Our wallcovering products are durable and require little attention to maintain their good looks. Light vacuuming on a regular basis will prevent dust build up and most marks can be removed by spot cleaning.

A) CLEANING BY VACUUMING

- Use a soft brush attachment from a vacuum cleaner.
- Start at the top of the wall and work your way down, doing a couple of panels at a time.

B) CLEANING BY SPOT CLEANING WALLPAPER

Listed below are the solutions that can be used for cleaning:

- Clear warm water
- Mild soapy warm water
- Do not use solvent-based cleaning agents, lacquer thinners, nail polish remover, pine oil or cleaning agent containing bleach, which may cause discoloration over a period of time.
- It is recommended that cleaning be done with a damp cloth. Clean only when necessary, and use as little moisture as possible.
- Avoid severe abrasion. Spot clean only.
